Views

- A view is a place where we put the logic of our application
- There are 2 types of views available
 - ✓ **Function based views**
 - ✓ **Class based views**

Views

- A view function, or “view” for short, is simply a Python function that takes a web request and returns a web response. This response can be the HTML contents of a Web page, or a redirect, or a 404 error, or an XML document, or an image, etc.

Note : You use view to create web pages, note that you need to associate a view to a URL to see it as a web page.

Thank You
