# DJANGO INSTALLATION ON WINDOWS

## Install Python

- Django is a python web framework, thus requiring python to be installed on your machine.
- After installation, open the command prompt and check that the python version matches the version you installed by executing following command

❖ `py - -version`

## PIP

- pip is a package manager for python and is included by default with the python installer. It helps to install and uninstall python packages (such as Django!).

# DJANGO INSTALLATION ON WINDOWS

## Install Django

- Django can be installed easily using pip within your virtual environment

### ❖ `pip install django`

- This will download and install the latest Django release.
- After the installation has completed, you can verify your Django installation by executing `django-admin --version` in the command prompt

Thank You
